

Research Methodology & IPR

QUESTION BANK — SET 1

Q1. A junior researcher is following a step-by-step research process without critically evaluating the methods being used. What advice would you give the researcher on the importance of understanding the rationale behind the steps they are following, and how could this improve their research outcomes?

Q2. A company wants to launch a new product and has asked you to conduct market research to determine customer preferences. Would you choose exploratory, descriptive, or applied research for this task, and why? How would this decision shape your research design?

Q3. You are tasked with conducting research on the causes of a recent rise in workplace stress among employees at a large corporation. Would an inductive or deductive approach be more appropriate for identifying the underlying causes, and how would this choice affect your conclusions?

Q4. As a researcher in India, you face challenges like limited access to funding and advanced technologies, while your project requires cutting-edge tools to analyze big data. How would you modify your research approach to meet the criteria of good research given these constraints, and what alternatives would you explore to ensure valid results?

Q5. You are part of a research team tasked with improving educational outcomes in rural areas. Several potential research problems have been identified, such as teacher absenteeism, lack of resources, and poor student engagement. How would you prioritize and select the most critical research problem to address, and what criteria would you use to justify your decision?

Q6. While conducting a study on the role of technology in education, your supervisor asks for an illustration of the potential outcomes of your research. How would you create an example that demonstrates the significance and practical implications of your study for educational policy?

Q7. You are a student tasked with researching how public transportation affects employment opportunities in urban areas. How would you use examples or illustrations from other studies to help clarify your research problem and guide your methodology?

Q8. You are conducting research on urban planning and are asked by your advisor to expand your literature review. What strategies would you use to ensure the literature review not only covers existing knowledge but also sets a foundation for your specific research questions?

Q9. After conducting a study on voter turnout, you discover that certain demographic groups were underrepresented due to poor sample selection. What non-sampling errors could have led to this underrepresentation, and how would you address these errors in future research?

Q10. You are designing a study on consumer behavior in the digital marketplace. How would you develop a conceptual framework that links key concepts such as online engagement, purchasing habits, and brand loyalty?
